Position title: **Data Analytics and Science Specialist**

Job Description:

- Collect, clean, and analyze large datasets pertaining to user behavior, music preferences, and streaming patterns to identify actionable insights.
- Develop and implement data models, algorithms, and statistical techniques to extract meaningful information from raw data.
- Collaborate with cross-functional teams including product management, engineering, and marketing to define and track relevant metrics, KPIs, and success criteria.
- Conduct in-depth exploratory data analysis to uncover trends, patterns, and anomalies, and communicate findings to stakeholders clearly and effectively.
- Identify opportunities for data-driven optimizations and provide recommendations for product enhancements, user acquisition, and retention strategies.
- Stay up-to-date with the latest advancements in data analytics and science techniques and tools, and contribute to the continuous improvement of our data infrastructure and processes.
